2. Understanding of Project

Dakota Access is proposing to construct a crude oil pipeline from points of origin in the Bakken/Three Forks play in North Dakota through portions of South Dakota and Iowa to a terminus in Patoka, Illinois. Approximately 311 miles of this project crosses seven counties in North Dakota. While Dakota Access report that the North Dakota portion of the project will be completed in three "spreads", the existence of three major rivers along the route essential break the project up into four discrete logistically-accessible segments. The estimate is being presented based on construction spread boundaries, although there may be some efficiencies gained by managing the actual field inspections based on logistical segments.

The Commission is authorized by the North Dakota Energy Conversion and Transmission Facility Act (ND Century Code Chapter 49-22) to determine that the location, construction, and operation of jurisdictional energy conversion and transmission facilities will produce minimal adverse effects on the environment and the welfare of the citizens of the state. Commission construction inspections ensure projects are constructed in compliance with the siting laws (ND Century Code Chapter 49-22) and rules (ND Administrative Code Article 69-06) and applicable Commission Orders.

While the Commission's order will incorporate by reference other permits issued by other regulatory agencies, the focus of Keitu's field inspections will focus on the provisions specific to the Commission's Order such as topsoil management and depth of cover.

Keitu will perform construction inspections applying engineering and science principles for the purpose of ensuring that energy conversion and transmission facilities authorized by the Commission are constructed in compliance with the siting laws and applicable Commission orders. Nathan Gaffrey PE, Project Engineer, is assigned to the project and is capable of reading and interpreting relevant laws, rules, and Commission precedent for proper execution of the projects.

All data will become the property of the Commission upon completion. All data will be generated in the following formats and standards where applicable:

- MS Word
- MS Excel
- Adobe Acrobat
- ESRI graphic information system

Keitu shall provide a copy of field inspection notes within 7 days, after each field inspection. The Commission will be notified within 24 business hours of any suspected non-compliance issues. Upon completion of the field inspections, Keitu shall submit within 30 days a written Construction Inspection Report. This report will include specific supporting documentation and photographs regarding issues resolved and those remaining issues as well as recommendations for resolution of issues. The report will also contain conclusions as to whether the project has been constructed in compliance with applicable Commission Orders. Immediately following the cover and table of contents of the Construction Inspection Report will be an executive summary of the inspection findings and issues remaining to be resolved.

3. Project Basis

Keitu is proposing to perform the services outlined on a Time and Material basis, with a Not to Exceed (NTE) Limit as presented on Project Bid/Estimates in this document. The Bid/Estimates include construction inspection reports and post construction reports as outlined below and presented in detail on the enclosed spreadsheets. An estimated bid cost and bid estimate with a project contingency is listed. The bid estimate with project contingency is to be used for the cap for this project. It has been requested by the Commission to have the Project Bid/Estimate separated into the two following parts. Part 1). Inspections of the six pipeline terminal sites (Estimate provided to the Commission on January 8, 2016.) and Part 2). Inspections for the pipeline route.

The project was estimated for the construction inspections, "As-Built" inspections, and a revegetation inspection. At the onset of construction, the inspections will focus on the topsoil removal/segregation. A representative from Keitu will be at each of the anticipated three spreads for a period of two days to observe the topsoil removal process. Transitioning from topsoil removal to pipeline construction, Keitu has estimated one site visit per week for the duration of the twenty-five week project. At these inspections, topsoil removal will continue to be monitored along with the pipeline "as-built"/ construction progress. Once the pipeline is installed a construction report will be issued. Finally, approximately a year and one-half after reseeding of the entire pipeline route has occurred a revegetation inspection will be performed and a report issued. This report will be reviewed and approved by the designated Project Engineer.

4. Project Bids / Estimates

If additional costs are required due to a change in the scope of work or unforeseen site conditions, Keitu will notify the Commission prior to proceeding. Keitu has committed to the Commission to holding firm our September 1, 2014 fee schedule through the duration of this project. In addition, we have revised downward our vehicle costs to reflect lower gasoline prices but adjusted our meal and lodging North Dakota per diems to reflect 2016 US GSA rates.

Keitu's team looks forward to the opportunity to provide professional, cost-effective, on-time, and high-quality services to the North Dakota Public Service Commission. If you have questions or comments regarding the information in this proposal, please do not hesitate to contact Nathan Gaffrey or myself at our Mandan office.

Sincerely,
